

Project Report: Blinkit Sales Analysis

Introduction

Blinkit is a last-minute delivery app catering to a variety of consumer needs, including groceries, household items, and personal care products. This project aims to analyze sales data using **Excel charts and pivot tables** to derive key insights into revenue, customer behavior, and outlet performance.

Objectives

The primary objectives of this analysis are:

- To understand overall sales performance.
- To identify key revenue-driving products and categories.
- To analyze customer purchasing trends.
- To assess outlet type performance.
- To provide actionable recommendations for business growth.

Data Analysis Methodology

Tools Used:

- **Microsoft Excel** (Pivot Tables, Charts, Conditional Formatting)
- **Data Cleaning & Preprocessing** (Handling missing values, data formatting)
- **Visualization Techniques** (Bar charts, Pie charts, Line graphs, Conditional Formatting)

Key Insights from the Analysis

Sales Performance Overview

- **Total Revenue:** ₹12,01,681.49
- **Total Orders:** 8,523
- **Average Sales Value per Order:** ₹140.99
- **Average Customer Rating:** 3.97

Sales Breakdown by Item Type

- **Top Performing Categories:**
 - Fruits & Vegetables (₹1,78,124.08)
 - Snack Foods (₹1,74,343.32)
 - Household Items (₹1,39,576.53)
- **Lower Revenue Categories:**
 - Seafood (₹9,077.87)
 - Breakfast Items (₹15,596.70)

- Starchy Foods (₹22,451.89)

Fat Type Analysis

- **Low Fat Products:** 65% of total sales
- **Regular Products:** 35% of total sales

Outlet Type Performance

- **Highest Revenue Generating Outlet:** Supermarket Type 1 (₹7,87,550)
- **Highest Order Volume:** Grocery Store (1,083 orders)
- **Tier 1 Outlets outperform Tier 2 and Tier 3 outlets in revenue.**

Revenue by Establishment Year

- Business saw peak sales around 2018.
- A decline was noted in subsequent years, indicating potential market shifts or increased competition.

Visualization Techniques Used

To enhance data interpretation, the following Excel visualizations were used:

- **Pivot Tables:** For category-wise sales breakdown and revenue comparison.
- **Bar Charts:** To compare item-wise sales figures.
- **Pie Charts:** To depict fat type sales distribution.
- **Line Graphs:** To analyze revenue trends over the years.
- **Conditional Formatting:** To highlight high and low-performing product categories.

7. Conclusion

This sales analysis using **Excel pivot tables and charts** has provided valuable insights into Blinkit's sales performance. The data indicates strong sales in specific product categories and outlet types, highlighting areas for strategic focus. Implementing the recommendations can help improve revenue, optimize inventory, and enhance customer experience, leading to business growth.
